StudyBoost Project

STARTUP PRESENTATION

Problem Statement

We decided to create StudyBoost after observing common challenges students face in exam preparation at Innopolis University.

Little Research Provided

Key findings

1

All participants rely on Notion for note-taking and study preparation.

2

Two out of three participants utilize Quizlet for creating and studying flashcards.
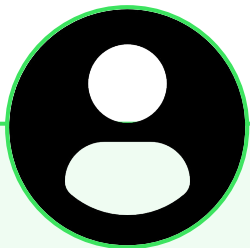

3

Integration issues among these tools were highlighted by two out of three participants as a significant usability challenge in their current study routines.
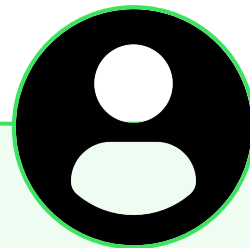

The Solution

Our project provides an integrated study tool available as a website, designed to address the diverse needs of students at Innopolis University. By offering functionalities such as automatic quiz generation from notes, concise note summarization, our solution enhances learning efficiency and organization. The tool creates personalized and relevant study aids, ensuring adaptability to individual learning styles.
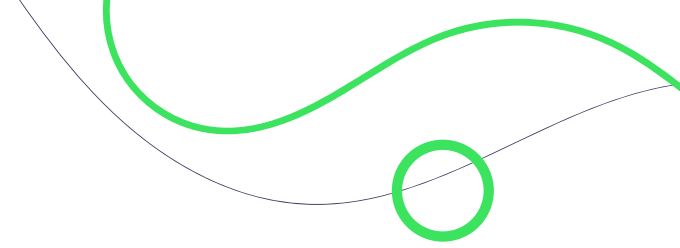

User Reviews

The quiz generator scores 8/10 for relevance, effectively covering key database concepts like redundancy and storage, but could benefit from more detailed questions.

While generally clear and concise, with an 8/10 for question conciseness, some answer choices could be clearer. With a generation time of 49.6 seconds, it performs adequately but could benefit from optimization for quicker output.

Other details next week

Conclusion

Improving study relies on human's self assessment and best tool for that - our application with quizzes and notes summary

Give it a try for a boost in your studies!
